

Inland Distribution is an essential part of the customer's supply chain.

Specializing in long distance carriage of automotive, agricultural, construction and other rolling equipment, Wallenius Wilhelmsen Logistics (WWL) ensures your products are safely transported all the way from factory or port to final destination.

### Global network

Through our global network of experienced personnel, inland distribution entities and dedicated suppliers, WWL manage land transportation of more than 2.5 million vehicles and other rolling equipment annually.

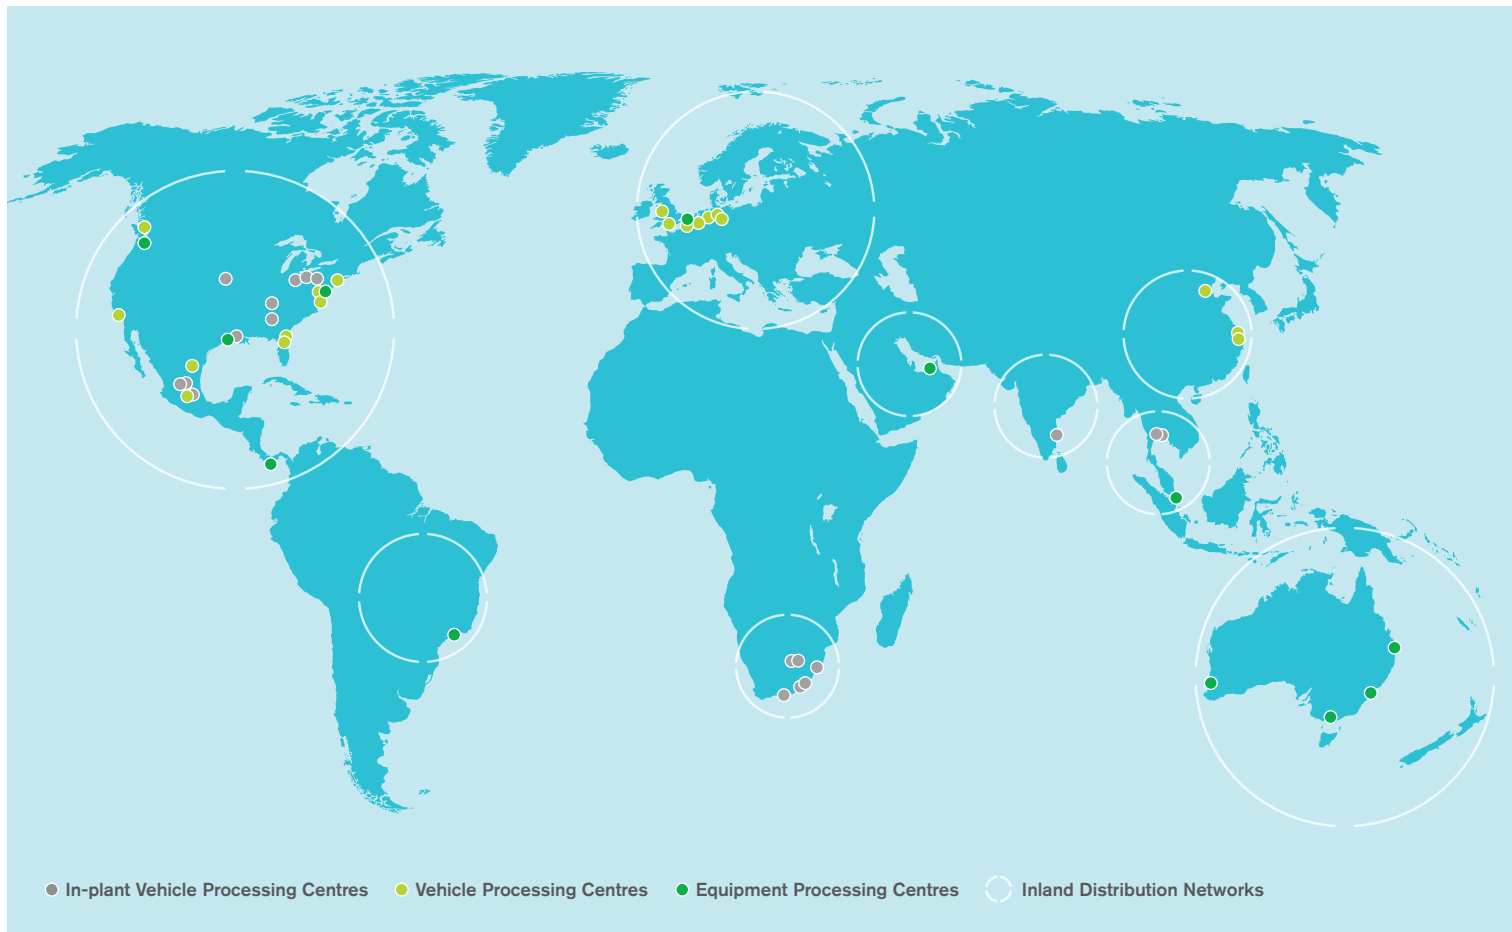

We operate through a combination of own trucking fleet, management of dedicated subcontractors and procurement of services from independent local road, rail, barge and short sea operators.

We can provide:

- Port distribution services, creating a seamless move connecting land and sea.
- Inland network services: from factories or ports to a dealer network, WWL designs transport solutions in order to optimize costs and level of service.

### Port distribution services

Transportation requires a fine tuned interaction between our ocean, terminal, technical and inland distribution capabilities. WWL has dedicated inland distribution/forwarding teams located at main ocean ports and terminals, to take care of your factory to port or port to dealer distribution. WWL provides a one-stop quality service adjusted to suit all local market conditions.
