

Technical Services is an important part of the customer's supply chain. Specialising in automotive, rolling equipment and breakbulk cargo, Wallenius Wilhelmsen Logistics (WWL) ensures all products can be processed and made ready, whether at exit from the plant or at entry into the destined market.

Global approach and coverage

Customers can be assured that their pre-determined product quality standards are met prior to market distribution. Our global approach and coverage is offered both through WWL's expanding network of own facilities and customer in-plant operations in Asia, Europe, Americas and Oceania.

WWL facilities

In our Processing Centres we have a strong focus on quality, cost and delivery (QCD). Located at key ocean terminals and inland locations, we provide a close link to our ocean and inland networks. Today our expanding network comprises more than 38 vehicle and 12 equipment facilities processing more than 4 million cars and 25,000 rolling equipment units annually.

Customer in-plant operations

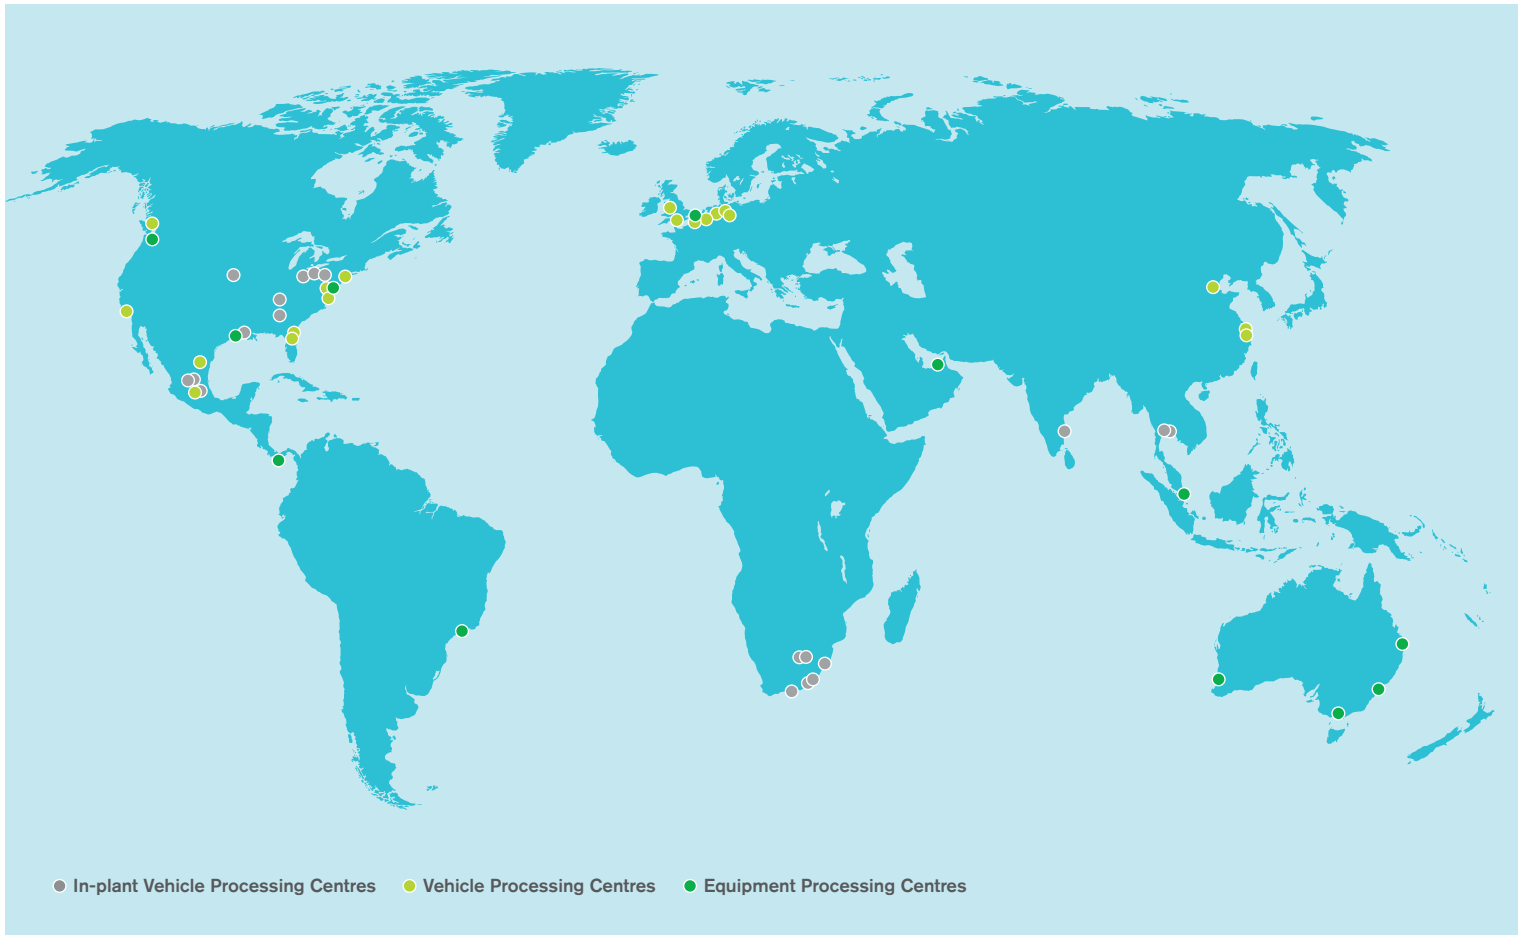

End of line accessory quality control, fitment and distribution are critical areas in final vehicle production. We can provide systems, human resources and distribution models to ensure your products are ready for market from your factories.

Benefit from reduced time and costs

Our services and sites are designed to lower your inventory carrying costs, cut lead times, increase products availability and provide a consistent quality end product.

Procured services through strategic partnerships

Procurement of technical services can be provided in locations where we have no established operations. Any procurement requires the potential supplier to meet WWL's strict supplier guidelines to ensure quality is consistent with customer's requirements.

IN BRIEF

- Facility numbers: 50 (38 vehicle and 12 equipment processing facilities)
- Annual throughput: More than 4 million units

TECHNICAL SERVICES OFFERING CONSISTS OF

- Pre-delivery Inspection (PDI)
- Accessory fittings
- Repairs
 - Panel and Paint
 - Mechanical
- Storage/yard management
- Washing
- Vehicle preparation
- Receipt & dispatch at
 - Plants
 - Ports & Railheads
 - Distribution centers

Storage management

Paint repairs

Pre-delivery Inspection (PDI)

Accessory fittings

Wallenius Wilhelmsen Logistics (www.2wglobal.com) delivers innovative and sustainable global shipping and logistics solutions for manufacturers of cars, trucks, heavy equipment and specialized cargo. The company also specialises in handling complex project cargoes such as rail cars, power generators, mining equipment and yachts. WWL's sophisticated supply chain management services ensure an efficient integration of ocean transportation, inland distribution, terminal handling and a large comprehensive range of specialized technical services.
